Ing a no Ring

Professor Rönigen, of Würzburg, profiting by Lemard's results, accidentally discovered that the rays coming from a Crookes tube, through the glass itself, could photograph the bones in the Eving hand, coins inside a purse, and other objects covered up or hid in the dark. Some bodies, such as flesh, paper, wood, ebonite, or vulcanised fibre, thin sheets of metal, and so on, are more or less transparent, and others, such as bones, earbon, quarts, thick plates of metal, are more or less opaque to the rays. The human hand, for example, consisting of flesh and bones, allows the rays to pass easily through the flesh, but not through the bones. Consequently, when it is interposed between the rays and a photographic plate, the skeleton inside is photographed on the plate. A lead pencil photographed in this way shows only the black lead, and a razor with a horn handle only the black lead, and a razor with a horn handle only the black lead, and a razor with a horn handle only the black lead, and a razor with a horn handle only the black lead, and a razor with a horn handle only the black lead, and a razor with a horn handle only the black lead, and a razor with a horn handle only the black lead, and a razor with a horn handle only the black lead, and a razor with a horn handle only the black lead, on a razor with a horn handle only the black lead, on a razor with a horn handle only the black lead, but a result of the razor of the firm of Swinton & Stanton, the well-known electrical engineers, of Victoria Street, Westminster, a skillful experimentalist, who was the first to turn to the subject in this country, I have witnessed the taking of these "abdow photographs," as they are called, somewhat erroseously, for "radiographs" or "cryptographs would be a better word, and shall briefly describe his method. Röntgen employs an induction coil insulated in oil to excite the Crookes tube and yield the rays, but Mr Swinton uses a "high frequency current," obtained from apparatus similar

Some photos from an event and exhibit in Pittsburgh Children's Museum, "How You Wear It". This was really an incredible exhibit of fashion and creativity. The curation of pieces was extraordinarily well done. One of the big highlights was seeing the mind-blowing work of FashionTech designer Anouk Wipprecht: "Futuristic dresses created by high-tech fashion designer and innovator Anouk Wipprecht. By merging technology with fashion, Anouk creates dresses that move, breath and... Topics: Fashion, Technology, Robotics

10KW Snook Interrupterless X-Ray

Jul 6, 2021

Jeff Behary

movies

High speed X-Ray, early 1900s, 10KW. Tested here at 1KW input power. This X-Ray uses a 250kV transformer rated at 10,000W and a synchronous rectifier. Restored by Jeff Behary and Daniel Cuscela. The unit was missing the controller, which was generously donated by Bill Wysock of Tesla Technology Research.

Topic: X-Ray
